

NLP Wrap-up & Skills

By: Aditi Chaudhari

Through the course Human Language Technologies, I gained a plethora of new skills and terminology related to NLP, including tokenization, lemmatization, POS tagging, WordNet, N-grams, parsing, web scraping, information extraction, NER, vectorization, and different machine learning approaches to NLP. My Python skills grew exponentially, and I gained experience with Python libraries such as NLTK, re, pickle, sklearn, pandas, NumPy, BeautifulSoup, seaborn, and keras. The soft skills I gained, such as communication, problem-solving, analytical skills, attention to detail, time management, adaptability, and creativity, were just as important.
